Compiègne, december 1st 2014

Object : Recommendation

To whom is concerned,

Jonathan COIGNARD, student of University of Technology of Compiègne, was a trainee in our site of Plouzané (Finistère). During his training period, he has developed skills for the modelling of non-linear water waves. The aim of his work was to assess the wave energy that can be converted in electric energy in front of a maritime structure.

He has successfully proposed a set of tools that are now used by our technicians. He has shown some autonomy and willpower. He was then eager to present his results in a national conference.

That is the reason why I recommend Jonathan COIGNARD for a position in a laboratory or a company.

Best regards

Research Director
